● **NURSERIES, Inc.**
NORTHERN BLVD.
ROSLYN, NEW YORK

Introduction

WE HAVE been growing quality nursery stock for thirty years, and our nursery, the largest in Nassau County, now contains a complete line of specimen plant material for landscaping private grounds, parks, and public buildings. You are invited to visit our nursery and make your personal inspection of the thousands of trees on display. Both in Spring and Fall, the flowers and fruits of many varieties of trees and shrubs, as well as the various interesting shades of evergreen foliage, make a drive through the nursery an enjoyable and colorful one.

OUR OFFICE is open every day including Sunday, and evenings during the planting season. Experienced nurserymen will gladly advise you on the kinds of materials suitable for every location, how to care for trees and shrubbery, and on any other questions you have concerning your garden.

PRICES LISTED herein are for freshly dug stock delivered on Long Island within twenty miles of the nursery. We will deliver at cost beyond the twenty mile area. There is a reasonable extra charge for planting. Special discounts quoted on ten or more plants of one variety and size. Where there is a range in price on any item, each individual tree will be priced on selection.

ALL MATERIAL, except where otherwise noted, is dug with a ball of earth around the roots, securely wrapped with burlap, and where necessary, with a platform under the ball. Particular care is taken at our nursery to dig every tree with a large part of the root system undisturbed, to insure its success and rapid growth after transplanting.

WE AGREE to supply a new tree free of charge to replace any tree which we plant which dies within one year from the time of planting, or to refund the purchase price at our option. This guarantee is contingent upon the carrying out of our terms of payment, and proper care being given the newly planted stock. The cost of transplanting the new tree is borne by the purchaser.

EXPLANATION OF SYMBOLS

BR—Bare root—without ball of earth, roots dipped in mud mixture to prevent drying out.

BB—Balled and burlapped.

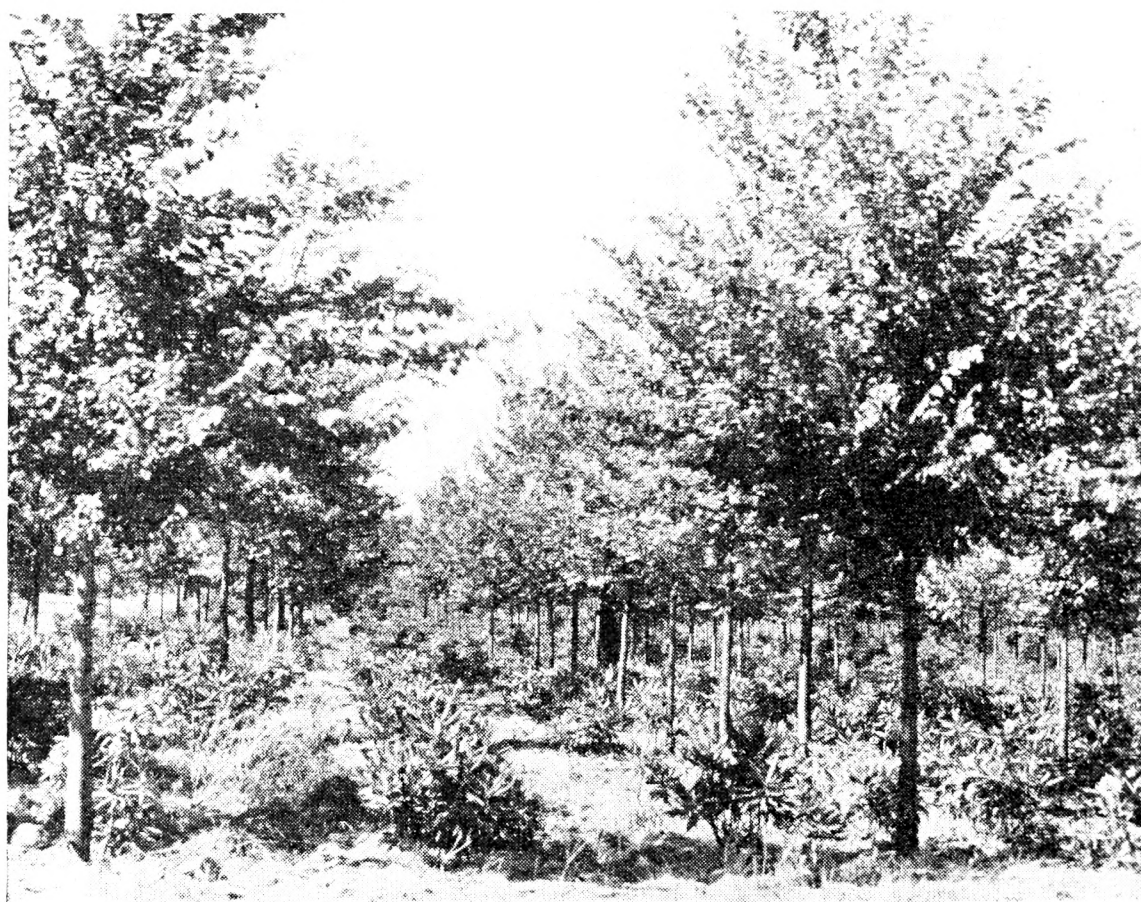

BP—Balled and burlapped with a platform supporting the ball.

Cal.—Diameter of trunk. Caliper is taken six inches from the ground on trees up to six inches in diameter, and one foot from the ground on larger trees.

Index on last page contains
both common and botanical
names for easy reference.
